

# Serigraph | IML Heated Lens

We know the cold here in Wisconsin - and we know how to thrive in it.

Our resistive electronic inks make it possible to defrost LED headlights and taillights, improving lighting optics and visibility.

Keep your products working in the hardest conditions and ensure your users' safety with our latest innovations in printed electronics.

## Key Features

- Environmentally sealed for added protection
- Printed circuits designed to match your product's geometry
- Use flat or formed designs for dramatic 3D-shaped electronics
- Dramatically reduce assembly complexity and thickness

## Next Steps

- Functional prototypes available
- Strong industry partnerships in electronic design and supply

**We are your partner** | From concept to supply
