

Serigraph | Illuminated Emblems

Made iconic through dynamic day-to-night transitions, we are revolutionizing automotive design with our In-Mold solutions for illuminated emblems.

Our expertise in light management brings your brand to life with captivating, uniform lighting in an ultra-thin assembly (less than 8mm thick).

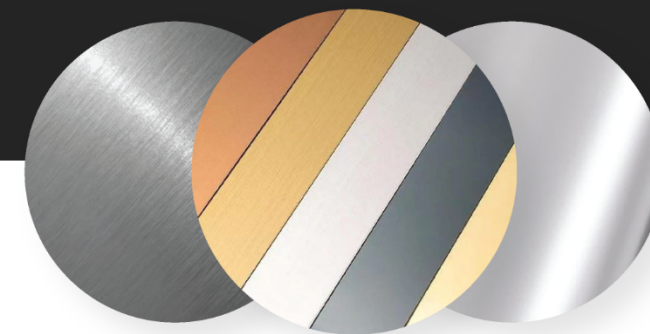

We offer a complete range of printed and tinted colors, as well as light-transmissive metallic finishes that transform into well-diffused light sources when backlit.

Key Features

- Durable coatings resist UV exposure and rock chips
- Compatible with radar and lidar technologies
- Fully customizable for your brand and application
- Utilize light for communication: pulsing, script, color, or blinking
- Hidden until lit patterns, icons, or text
- Environmentally sealed for added protection

Next Steps

- Functional prototypes available
- Strong industry partnerships in electronic design and supply

We are your partner | From concept to supply
