

Serigraph | Two Shot IML

So you've designed a complex part with no easy way to manufacture or assemble it? Look no further.

Our two-shot molding process tackles these challenges with ease. Preserve a pristine "A" surface while capturing all the details on the other side with secondary injection molding.

No visible ribs or sink marks, no adhesives or fasteners—plus, our encapsulated labels ensure the highest level of durability.

With two-shot IML, you CAN do it.

Key Features

- Deeply drawn parts and labels
- Choose up to two different resins for the first and second shots
- Fully customizable for your brand and application
- Allow light and/or radar/ lidar to pass through our assemblies
- Integrate assembly snaps, ribs, and light guides into the part
- Incorporate in-mold electronics

Next Steps

- Functional prototypes available
- Engineering support and guidance provided
